can i add this link to config.xml Please suggest A: It sounds like you are simply wanting to display a web link in a screen. While I'm not positive, it may be that you want to look at the URL_REQUEST_STATUS and maybe even some filters to get what you want. I would look at the URL_REQUEST_STATUS to see if it provides the result you want. The new performance-powered V6 turbocharged engine with stop-start technology is now standard on all-new 911 models, the 2.0-liter engine with 413 PS (295 kW) and 661 Nm (490 lb-ft) of torque. The new engine reduces fuel consumption by up to 35 percent compared to the outgoing V8 turbo. With its shorter lever ratio, gear changes, shift paddles, reduced response time and increased power delivery, the Porsche 911 accelerates even more quickly from 0 to 100 km/h (62 mph) than the model with the V8 engine and the six-speed manual transmission. The stop-start technology helps to significantly cut the fuel consumption of the new engine. When the engine is in operation, the transmission automatically engages the clutch and reduces the engine load when the vehicle is stopped, saving fuel. The electronic transmission control unit automatically disconnects the engine when the vehicle is stopped, and only disengages the clutch when the driver signals an intention to start the vehicle. Improved shift dynamics, more precise gear shifts and a shorter shift time of the double clutch gearbox make for a smoother drive and increased driver satisfaction. The standard stop-start system allows the driver to shut off the engine on the side of the road without being forced to start the vehicle with the starter button. Porsche has also introduced an optional Emergency Stop Assist, which enables the driver to call for emergency help using an active call function when the vehicle is immobilized due to a mechanical fault or accident. The new 911 models come with the help of the Porsche Active Hybrid, a system that combines an electric motor with a V6 turbocharged engine. The dual-motor system generates 250 PS (181 kW) and 608 Nm (443 lb-ft) of torque. The Porsche Active Hybrid uses battery and electric motor power to maintain the driver's control, so the 82157476af
